Items
Site Protocols / Emergency Procedures FH explained the site protocols/emergency procedures with the group attending the meeting at the Roydon Quarry office.
Purpose reiterated The purpose of the CLG must include, but not be limited to, the following: i) Engagement on an on-going and regular basis on matters associated with the quarrying operations including compliance with CRC resource consents; ii) Promotion of the flow of information relating to all District and Regional consents relating to the quarry including dust monitoring data (including location), metrological data, water abstraction data and groundwater quality data via a publicly available electronic sharing platform, established, operated and maintained by the consent holder to be utilised by the local community and the consent holder so as to, wherever possible, address any issues that may arise; and iii) To discuss the results of monitoring and any matters that may arise as a result of the monitoring
Previous Minutes The previous minutes were discussed and amended and approved by the group as a correct record. They can now be put onto the website.
Update from Fulton Hogan - Quarry still not fully open to the external market, but have seen a slight increase since October with sales. Pit-run is no longer being trucked to Pound Road, which has decreased volume out the gate, but hoping to slowly see this increase again with product sales. - The first section of the field conveyor for the stage 1 extraction area is now built and will be installed next month. - Cleanfilling hasn't started yet due to lack of space. Looking into whether bringing in clean fill and then trucking off site is an option, to meet customer demands.

- The field mist curtain is now fully automated and operational. It runs parallel to Dawson Road between the pit and the road. Water use - The site extracts water from the bore under the daily permitted activity limit of 100m³ this is then used for site operations and dust suppression
Incidents and Complaints - No noted incidents in CAM's since last meeting - No noted complaints since last meeting - Both SDC and ECan have had no complaints in regard to Roydon Quarry
Website - There are 80-110 people are checking the website monthly. Of those, there are around 100-160 views, so some users are repeat viewers. - Looking to update the webpage and make some changes, as below - o New dust monitors are live, so want to update the pictures and wording that relate to those – move away from reference to the build phase and towards the operational use. - o The T640 dust monitor is the device that will be shown on the website. This will give 3-hourly data every day, however, will be delayed by a week. The data will be date and time stamped. - o Other monitors are moved regularly, therefore the data won't match the locations and will cause confusion. - Discussion around the dust monitor data on the website and whether this is clear for Members of the Public. - Laura Aitken will provide a plotted map of readings from all dust monitors, for the 21st October 2025. This will be sent out with the meeting minutes. - The CLG will discuss the T640 dust monitor data again at the next meeting in April, once the changes have been made to the website.
Community Feedback - Templeton Residents Association Discussion Update - o Concerns around lack of transparency with consent conditions and management plan changes. - o Concerns regarding the High Court decision on water use consents for the quarry and the subsequent ramifications. Further discussions will be had regarding this on Monday 26th at the next TRA meeting. - o Concerns regarding lack of visibility on actual water volumes being used by the quarry. Previously when only the bore was being used, this was reported to both Ecan and on the website. Now, with Fulton Hogan able to buy extra water as required, there is lack of clarity around how much water is actually being used. - o Public facing monitoring data is limited. - o Concerns around erosion of trust, as the TRA found out through the media of the water consent decision by the high court. - o CCC is coming to the next TRA meeting on Monday 26th. The playground across from Templeton Primary School needs upgrading, TRA is looking at contributing financially. If FH ever wanted to contribute financially, then this project is an option.
Any other matters for discussion from the community - Discussion around consent conditions and if Fulton Hogan are within their rights or not, with reference to changing Management Plans in particular. Fulton Hogan are to seek absolute clarification on this matter from SDC. - It was decided that a section on potential/upcoming changes to any management plans would be added to the CLG agenda moving forward, so Fulton Hogan could present

potential changes to the group, before entering any formal processes. If changes are being working on between meetings then email will be used to let the CLG members know. The CLG doesn't approve changes but is keen to understand the why and any implications and to make comments. This will improve transparency and trust, whilst limiting surprises. - Discussion around whether the CLG would consider additional representation for the TRA party - either members themselves and can include, but not limited to, members of the local Waipuna Halswell-Hornby-Riccarton Community Board. The group agreed that an additional two to three CLG members could be sought so that if Jolene is unavailable, there is still representation, consideration to also be given to asking the Templeton Primary School for governance or parent representative.
Next meetings 5pm 21st April 2026 5pm 21st July 2026 5pm 20th October 2026 CLG meetings to be booked for the third Tuesday every quarter. Meeting closed at 6.10pm
