The new CLG members were given a tour of the quarry site prior to the meeting.

Items
Site Protocols / Emergency Procedures FH explained the site protocols/emergency procedures with the group attending the meeting at the Roydon Quarry office.
Purpose reiterated The purpose of the CLG must include, but not be limited to, the following: i) Engagement on an on-going and regular basis on matters associated with the quarrying operations including compliance with CRC resource consents; ii) Promotion of the flow of information relating to all District and Regional consents relating to the quarry including dust monitoring data (including location), metrological data, water abstraction data and groundwater quality data via a publicly available electronic sharing platform, established, operated and maintained by the consent holder to be utilised by the local community and the consent holder so as to, wherever possible, address any issues that may arise; and iii) To discuss the results of monitoring and any matters that may arise as a result of the monitoring
Previous Minutes The previous minutes were discussed and amended and approved by the group as a correct record. They can now be put onto the website.
Update from Fulton Hogan - Volumes out the gate have seen a small increase since the last meeting. Quarry is functioning at approximately 70% capacity, a busy day would be 150 transactions currently.

- Cleanfill is still being temporarily stored at Roydon and then relocated to other consented quarry cleanfill sites. This will probably continue for the next 6 months - First field conveyor is now operational – taking material from the active face to the central plans - Monitoring/compliance activity - o Noise monitoring testing has been completed. Results are compliant and sit within the noise limits – report is available on Roydon website. - o Respirable Silica monitoring report has been completed and was received on Monday, currently undergoing internal checks and will then be finalised and circulated on Friday to Te Whata Ora, ECan, the CLG Group and uploaded to the website. In summary, the results are below the relevant assessment criteria. Fulton Hogan will provide some sentences for Templeton Tales to put context around the report with a link to the report. CLG will also get. - o PM10 monitoring report will come out at the end of October, this is 12 months following Stage 1 extraction beginning. - o Traffic Monitoring is about to start, this was delayed due to roadworks being completed recently, but will identify whether any mitigation measures are required to improve safety. Purpose of the report findings is to assess the safety risk at the SH1/Dawsons Road roundabout arising from the impact of quarrying operations, on northbound traffic queuing back from the railway level crossing into the roundabout, and southbound traffic on Dawsons Road queuing back from SH1, towards the railway crossing. - ECan have put out Plan Change 8 to the Land and Water Regional Plan (PC8) for comment. This proposes rule changes around water, largely to fix issues that arose out of the 2023 Supreme Court decision around water bottling and changing the use of water. Fulton Hogan will be making a submission on this, due Tuesday 04th August
Water use - No water use concerns discussed
Upcoming Changes regarding Management Plans - No upcoming changes regarding Management Plans to discuss - It was noted that the Noise Management Plan does not require review – based off the compliant assessment
Complaints and Compliance Activity - No noted incidents in CAM's since last meeting - No noted complaints since last meeting - Both SDC and ECan have had no complaints in regard to Roydon Quarry
Website - Group reviewed website data and were showed addition of requested limit line in air quality graph (PM10 limit)
Community Feedback - No concerns or complaints of seriousness heard from the Community regarding the quarry
Any other matters for discussion from the community - Cody Cooper and John Cunningham given tour of Roydon Quarry prior to the meeting beginning, by Jack Kelliher, Troy Adamson, Kristian Otto and Don Chittock - Discussion raised regarding the new overbridge that is being built potentially increasing traffic along Jones Road. In addition, there seems to be more traffic on SH1 than originally thought. Guy Aitkinson confirmed March 2028 is the operative deadline for the overpass so it is hard to comment currently on what this may look like. The potential effect of any increased traffic and the interaction with quarry trucks should be picked up in future Traffic Monitoring reports.

Roydon Quarry Community Liaison Group Meeting

- Question asked regarding moisture content in materials that are stockpiled. Specifically, how much moisture is lost when the material is stockpiled, and if it is much drier when transported again, could it result in dust from uncovered trucks? Advised that moisture levels usually sit at 3% and trucks must pass under the fitted spray bar upon leaving to mitigate this and preserve the quality of the product itself.
Next meetings 5pm 20 th October 2026 CLG meetings to be booked for the third Tuesday every quarter. Meeting closed at 5.49 pm
